

Year 6 Holiday Project

October 2020

Our science focus this next half-term is called *Everything Changes* which explores how living things have changed over the years. One of the ways we can demonstrate change in living things is through studying fossil records.

Therefore, we would like you to find out what a fossil is and explore how fossils are formed.

We would also like you to explore the Natural History Museum website (<http://www.nhm.ac.uk/>) to find out more about fossils and dinosaurs. *Remember, when you use the internet, please be safe and tell an adult.*

Then create a presentation on a j2e page on one of the following:

- a) A dinosaur of your choice – demonstrating your understanding of the type of animal it was and describing its main features, habitat and date of extinction.
- b) Mary Anning – who she was and why she was an important scientific figure.
- c) Create a flow chart (using diagrams and pictures) of how fossils are formed.

Use the class email to return your completed work to your class teacher by Monday 2nd November. (6red@grove.bham.sch.uk, 6green@grove.bham.sch.uk, 6yellow@grove.bham.sch.uk)
